Repair User Guide — Factory

Type 2: Not Under Warranty (Without Serial No.) — Tested OK

Source: Odoo Tour Recorder export — `Tour/1B. Repair User Guide - Factory [ Not Under Warranty (Without Serial No ) - Tested Ok ].json`

Scenario: The product's warranty period has expired and it has no serial number. The technician tests the item and it is OK, so it is returned to the customer without a quotation or payment.

Every screenshot below is a real capture from a single, clean, fully-passing automated run — taken *before* each step's action, with the element to use framed in red.

1. Overview

This manual explains how to register and complete a factory repair for an out-of-warranty product with **no serial number** when the technician finds the item **Tested OK** — nothing needs repairing. The process runs from the Helpdesk ticket at the receiving branch, through the factory, and ends when the item is dispatched back to the customer.

Ticket stages covered

New | Sent to Factory | Received at Factory | Repair Completed | Sent to Sales Centre | Received at Sales Centre | Handed Over to Customer

Before you start

- You have access to the Helpdesk, Field Service and Inventory apps.
- The active company (top bar) is **Jinasena Agricultural Machinery (Pvt) Ltd.**
- The customer and product already exist in Odoo (Contacts and Product Master).
- The item has been physically brought to the branch by the customer.

Example data used in this manual

Field	Value

Type	Repair - Not Under Warranty (Without Serial No.)
Return Receipt Location	BR-AM/Stock (Jinasena Ampara Branch)
Repair Reason	Difficult to start the engine
Job Location	Factory Repair
Customer	KURUNEGALA CASH CUSTOMER
Product	[JMC6] Multi Chopper 6Hp (Tractor Type)
Repair result	Tested OK (no parts, quotation or payment)

How to read each step

Navigation	Where you are in Odoo (app › menu › screen / dialog).
Action	What to click, select, or type.
Description	Why the step is needed and what happens.
Screenshot	The screen you are on *right before* performing the action, with the element to use framed in red.

Step summary

Section	Steps	Purpose
A	1–11	Open Helpdesk, create the ticket, classify it, and generate a temporary serial number.
B	12–14	Return the item into stock and validate the receipt.
C	15–18	Send to and receive at the factory, then create the Field Service task.
D	19–21	Mark the item Tested OK, mark the task done, and return to the ticket.
E	22–26	Send via the sales centre, dispatch, and validate the return to the customer.

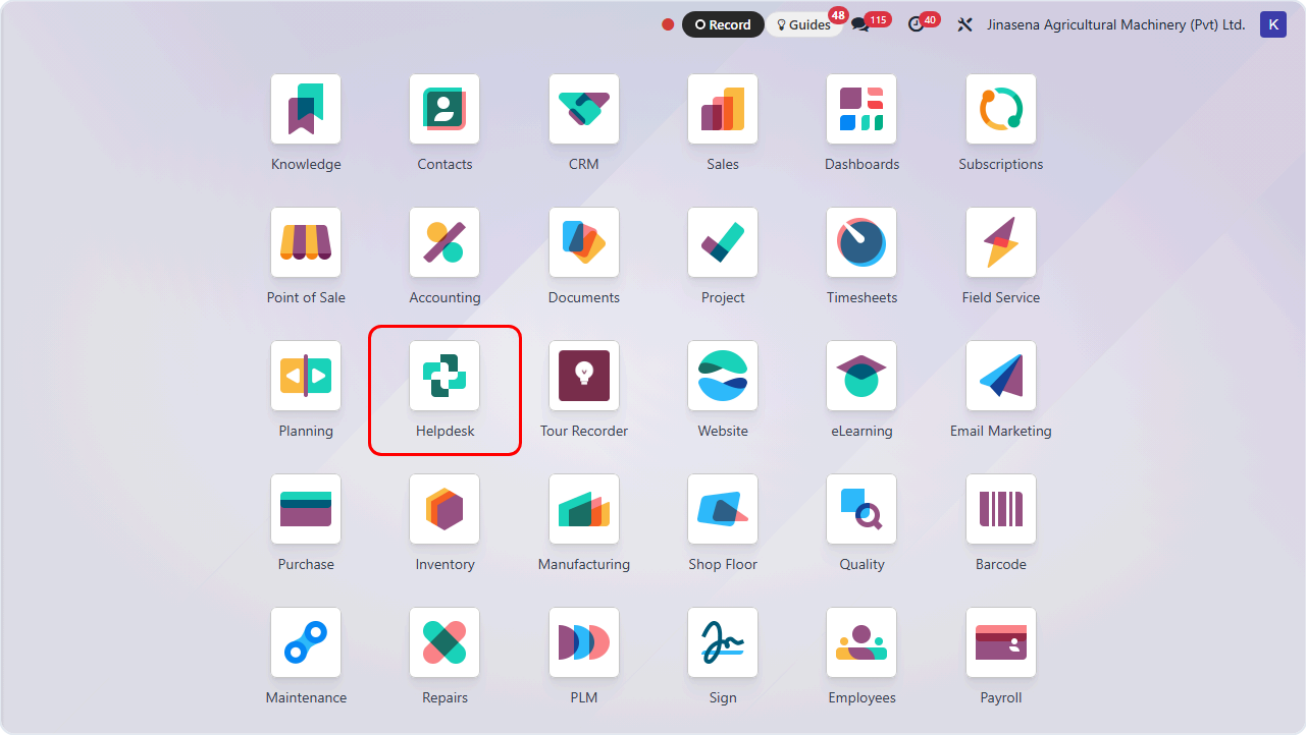

Section A — Create the Repair Ticket (Steps 1–11)

1 Open the HelpDesk app

Navigation Odoo Home → Apps

Action **Click the Helpdesk app icon on the home screen.**

Description Opens the Helpdesk Overview dashboard, showing every support team you have access to.

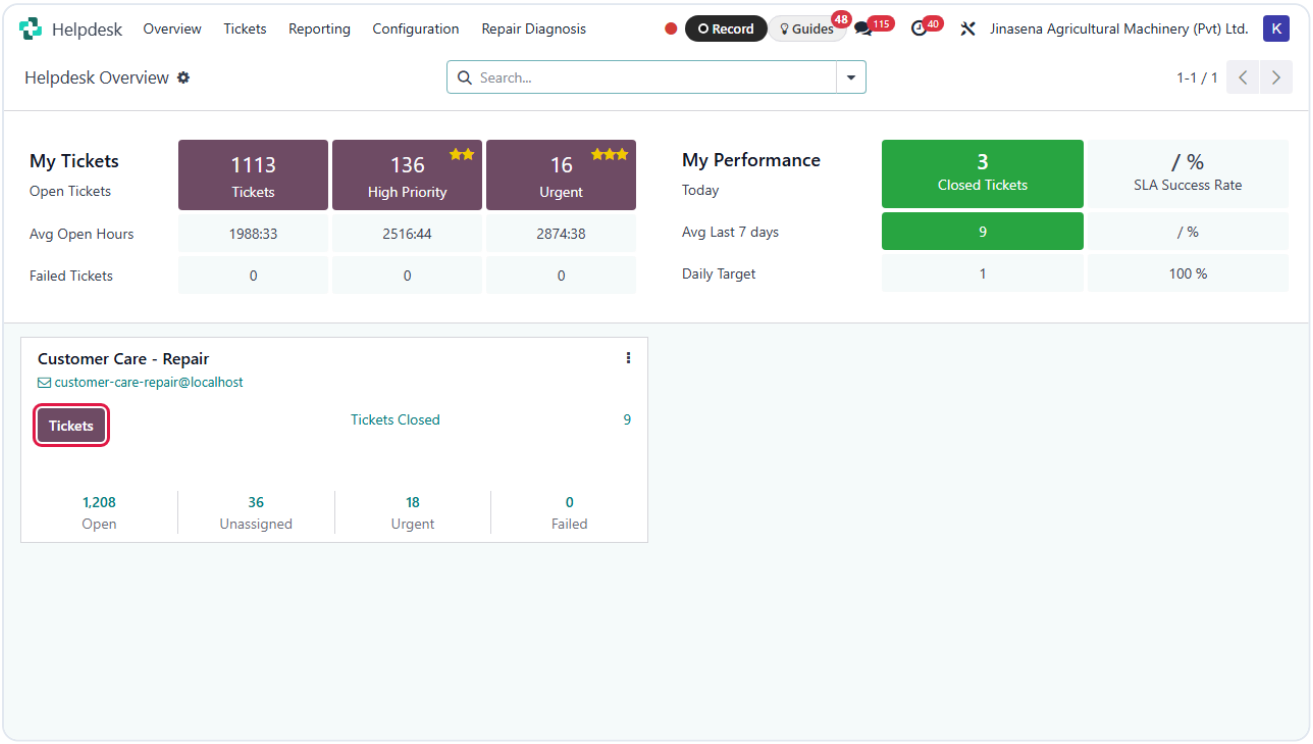

Odoo Apps home screen — Helpdesk app icon

2 Open the repair tickets

Navigation Helpdesk → Overview → Customer Care - Repair

Action **On the Customer Care - Repair team card, click Tickets.**

Description Opens the list of repair tickets already created for the team.

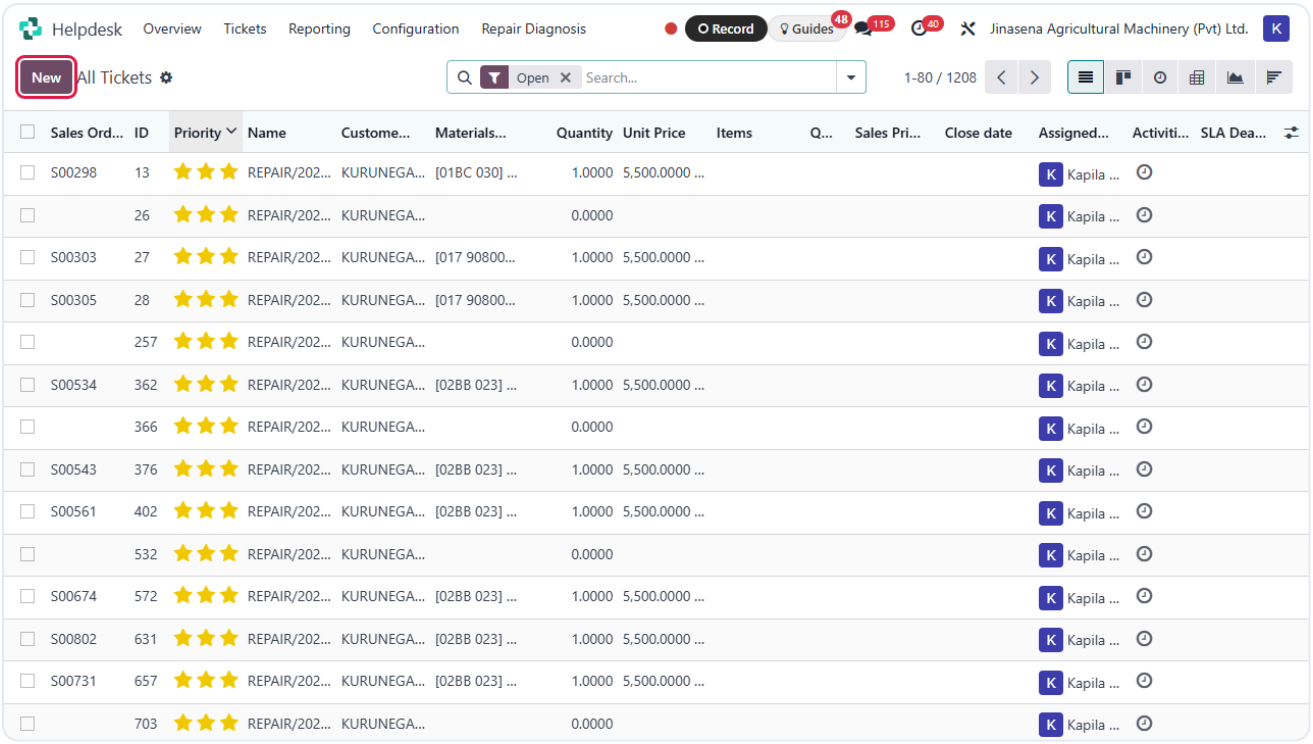

Helpdesk Overview — Tickets button on the Customer Care - Repair team card

3 Create a new ticket

Navigation Helpdesk → Customer Care - Repair (Tickets)

Action **Click New at the top-left of the ticket list.**

Description Opens a blank Helpdesk ticket form for the repair item received from the customer.

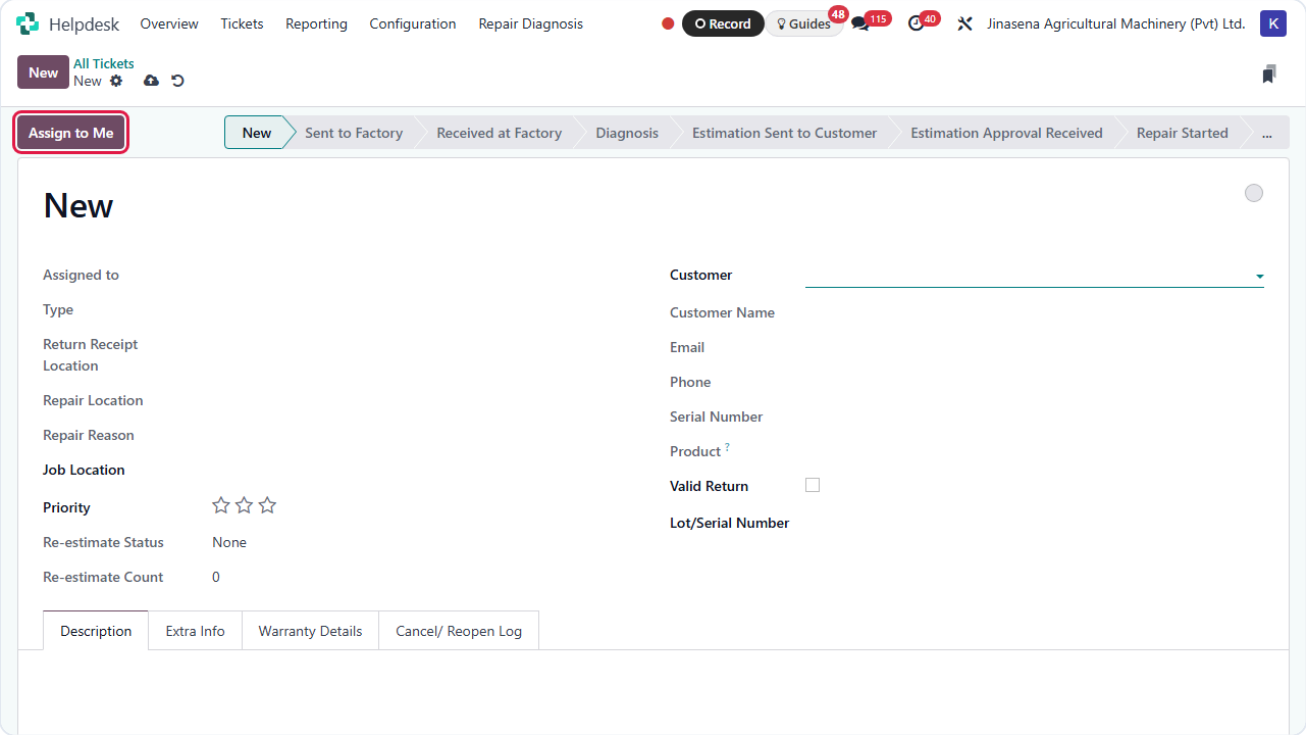

All Tickets list — New button

4 Assign the ticket to yourself

Navigation New ticket form

Action **Click Assign to Me in the status bar.**

Description Saves the ticket for the first time and assigns it to the current user. This also generates the ticket's sequence-based name (e.g. `REPAIR/2026/01601`) — the ticket has no user-editable title.

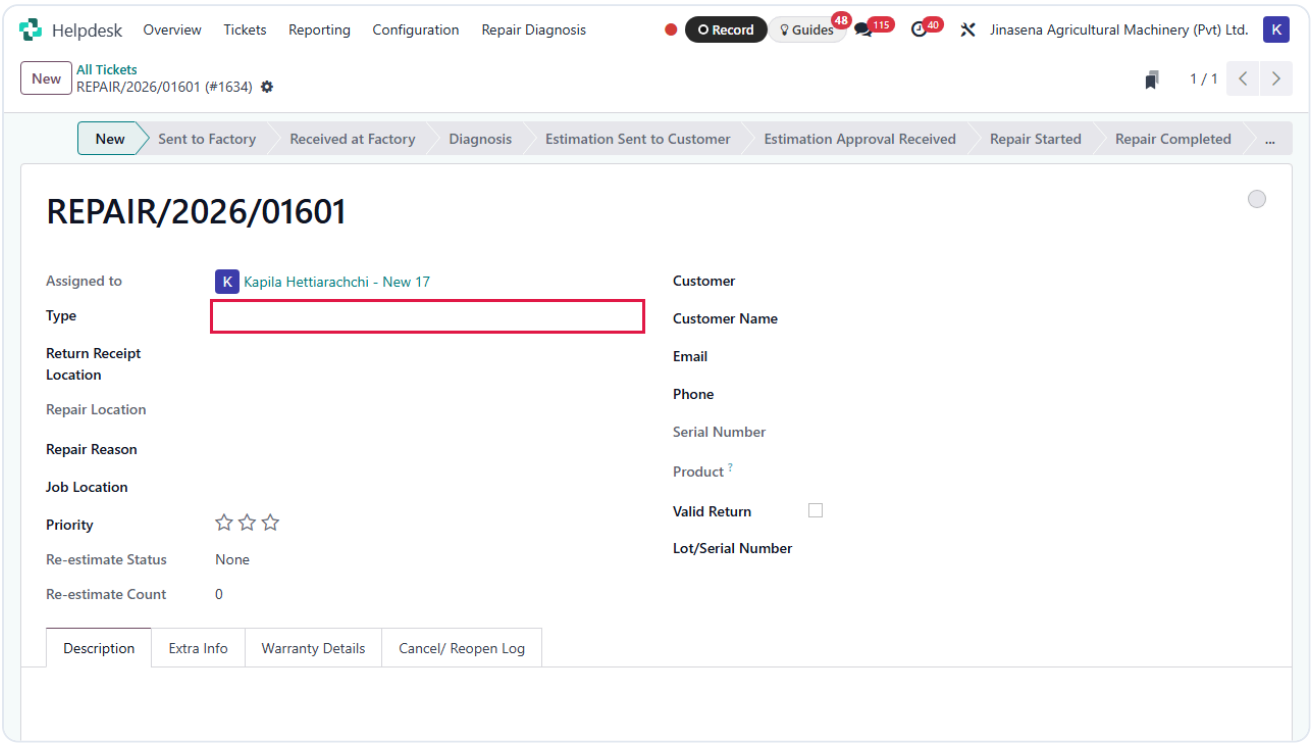

Blank new ticket form — Assign to Me button

5 Set the repair Type

Navigation Ticket form → Type field

Action **Click the Type field and select Repair - Not Under Warranty (Without Serial No.).**

Description Classifies items whose warranty has expired and that have no serial number. The field is a many2one autocomplete listing the repair types configured in Studio.

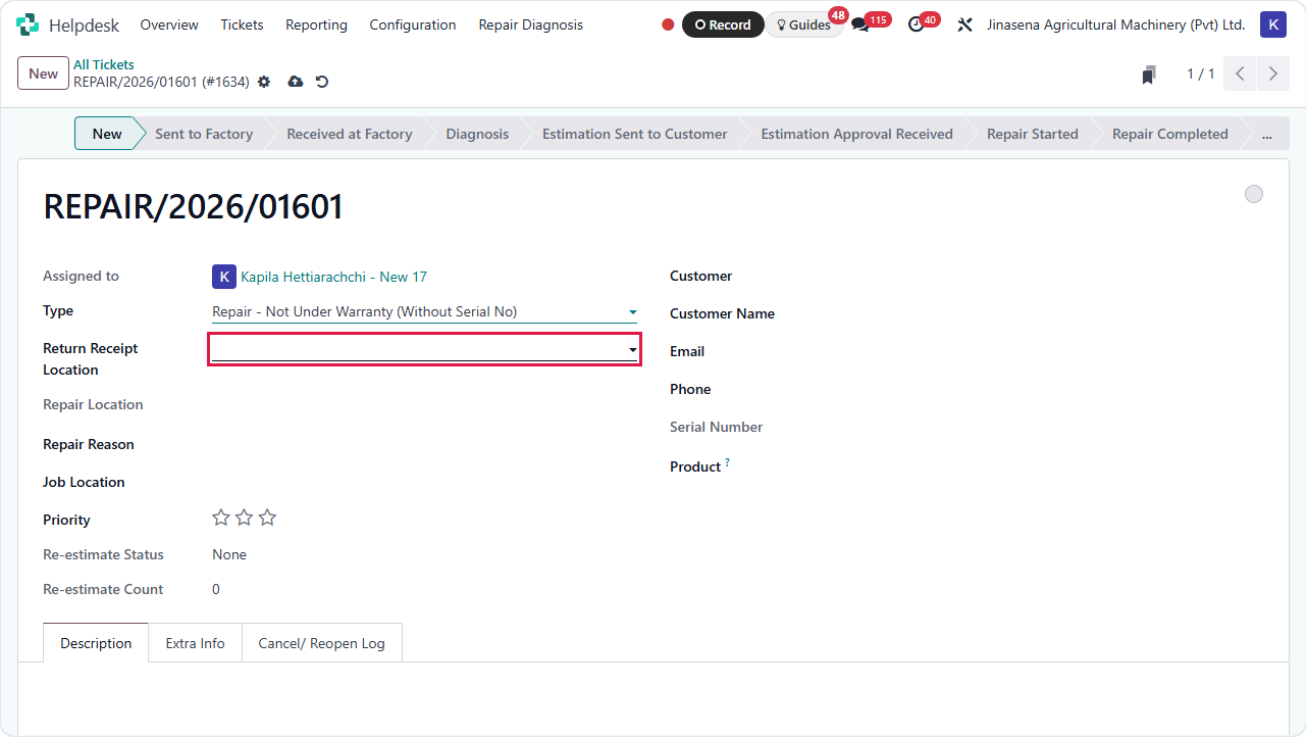

Ticket form — Type field

6 Set the Return Receipt Location

Navigation Ticket form → Return Receipt Location field

Action **Click Return Receipt Location and select the branch receiving the item (e.g. `BR-AM/Stock`, Jinasena Ampara Branch).**

Description The location where the repaired item will be received back for the customer.

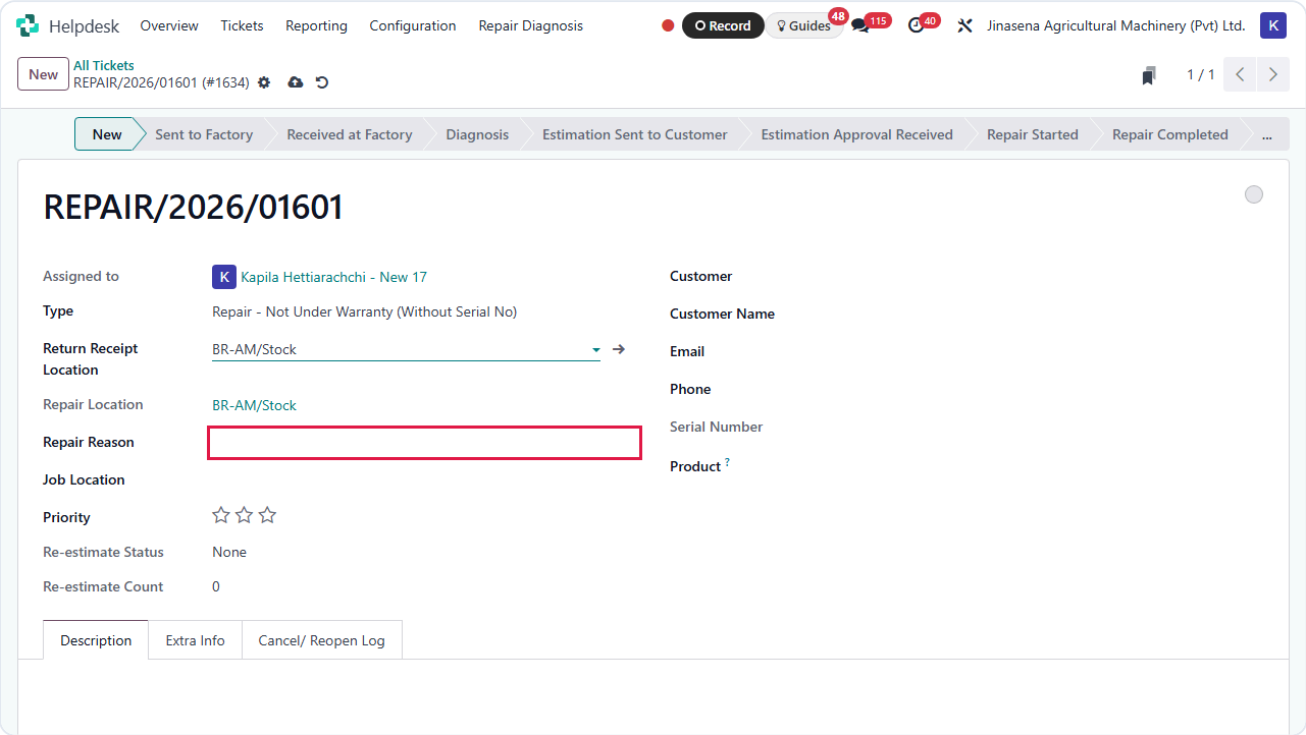

Ticket form — Return Receipt Location field

7 Select the Repair Reason

Navigation Ticket form → Repair Reason field

Action **Click Repair Reason and select the reported fault (e.g. `Difficult to start the engine`).**

Description Choose the common error that best matches the customer's complaint. This is a many2many tags field; at least one reason is required before the item can be returned.

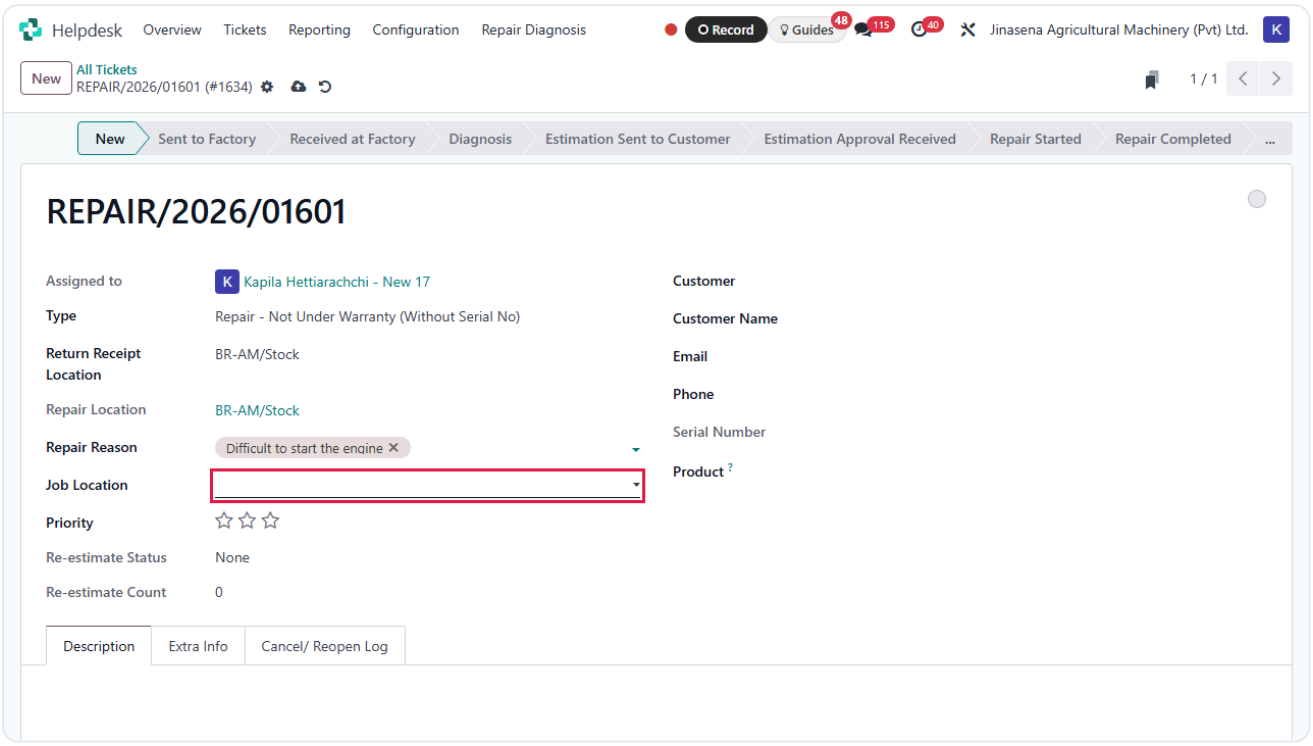

Ticket form — Repair Reason field

8 Select the Job Location

Navigation Ticket form → Job Location field

Action **In Job Location, select Factory Repair.**

Description Defines where the repair is performed. Factory Repair routes the item through Send to Factory / Received at Factory.

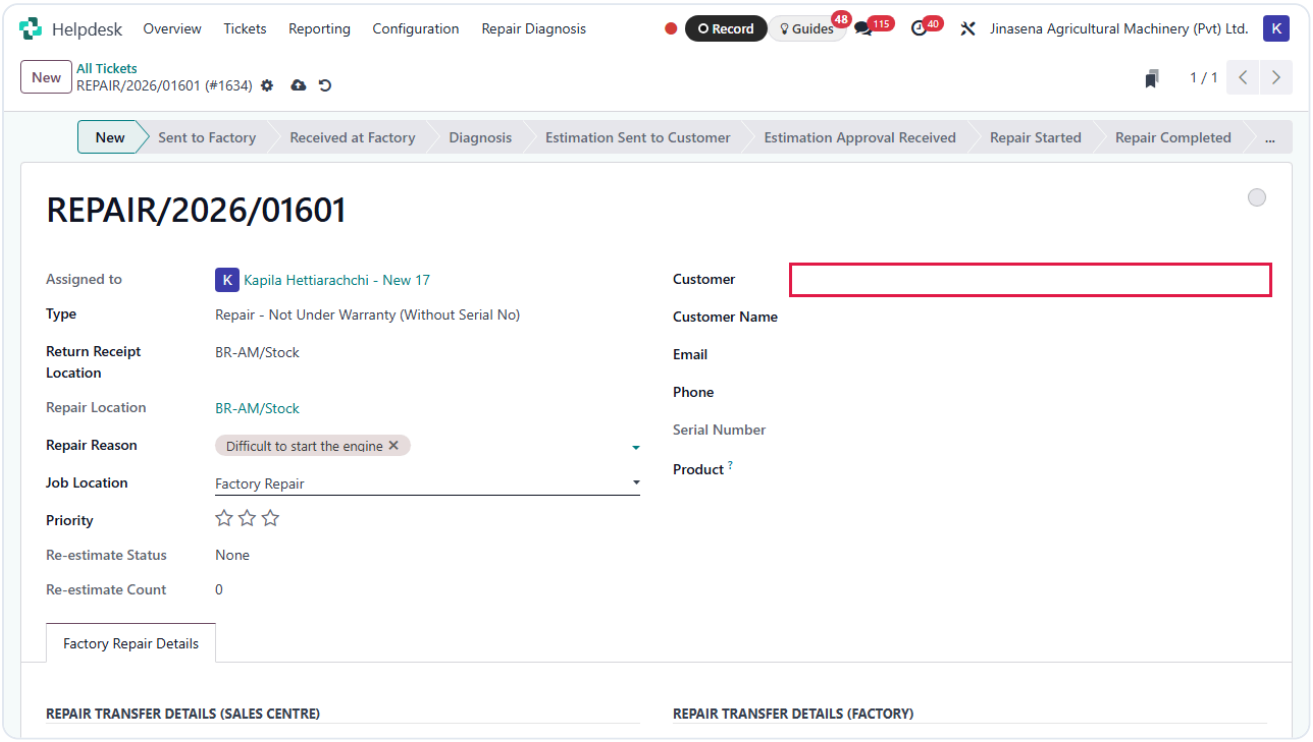

Ticket form — Job Location field

9 Select the Customer

Navigation Ticket form → Customer field

Action **Click Customer and select `KURUNEGALA CASH CUSTOMER`.**

Description Email and Phone are filled automatically from the customer record.

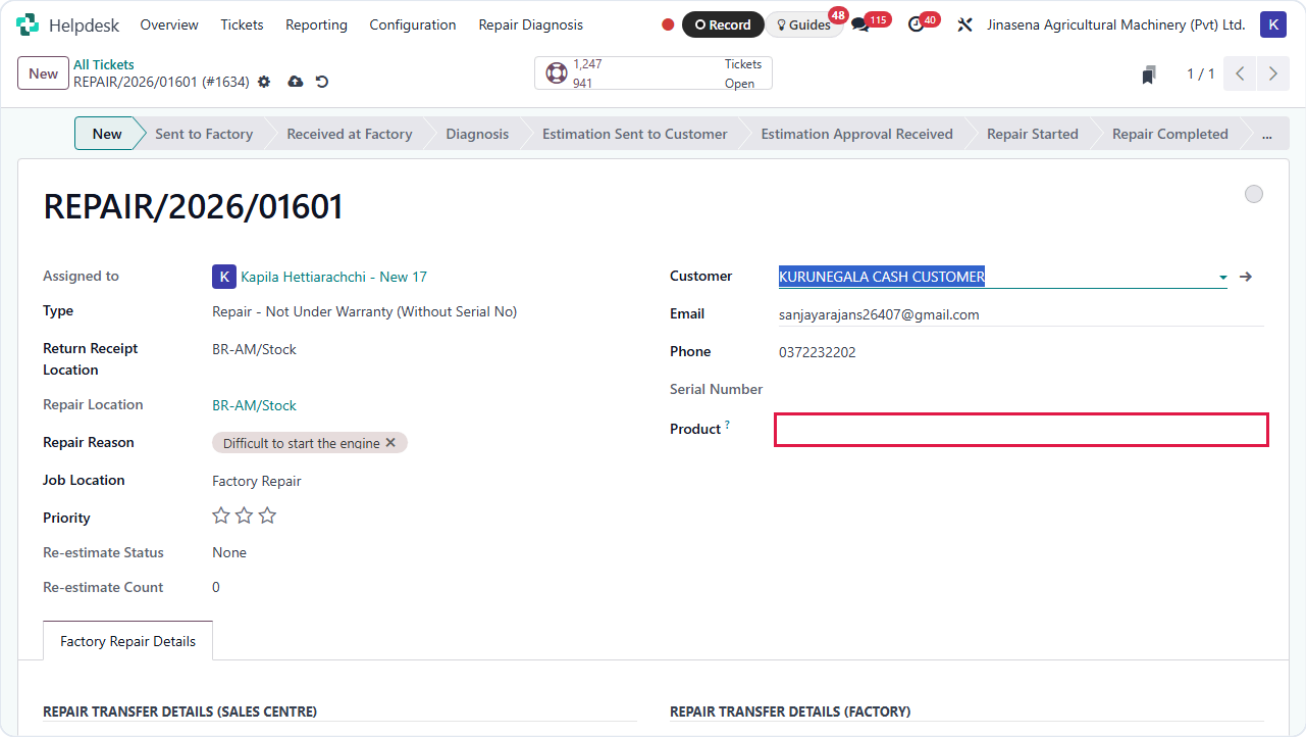

Ticket form — Customer field

10 Select the Product

Navigation Ticket form → Product field

Action **Click Product and select `[JMC6] Multi Chopper 6Hp (Tractor Type)`.**

Description The repair item from the Product Master. Once Customer, Product and Repair Reason are set, the **Create Serial No** button appears.

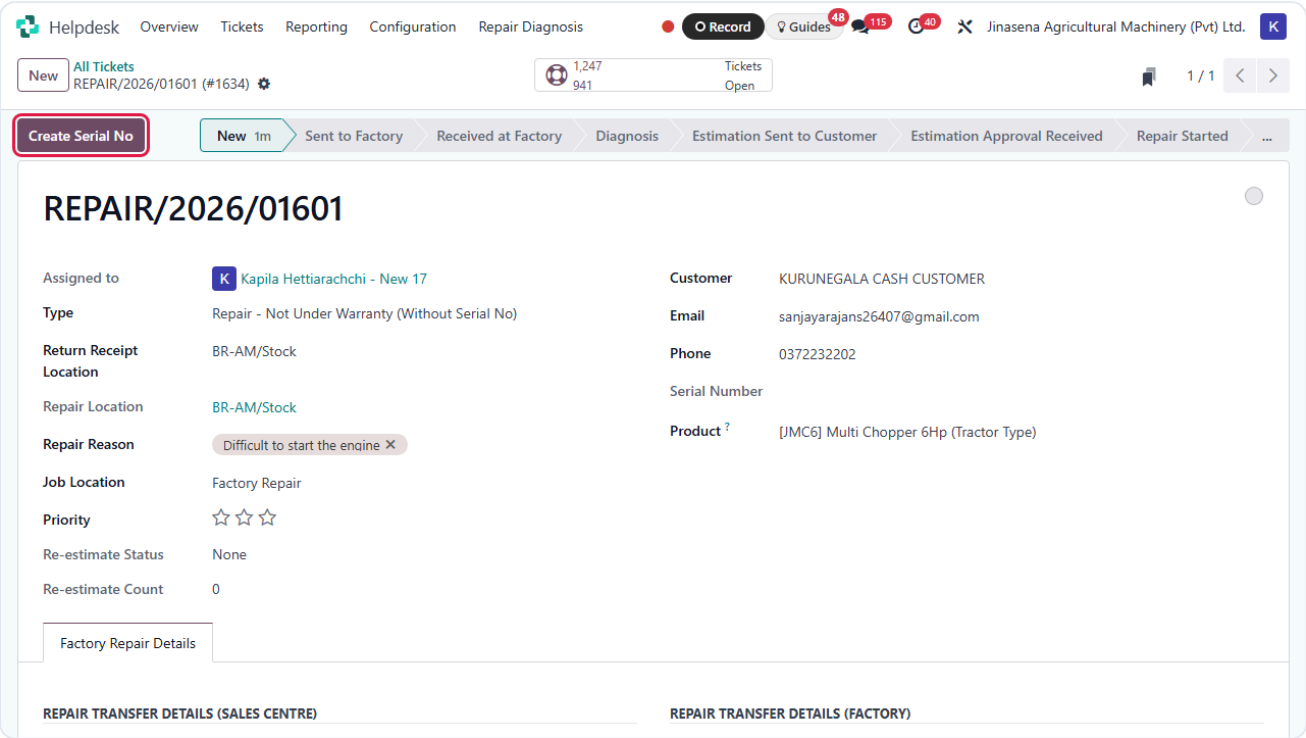

Ticket form — Product field

11 Create a temporary serial number

Navigation Ticket form → status bar

Action **Click Create Serial No.**

Description This repair type has no manufacturer serial number, so the system generates a temporary one (equal to the ticket number). Save the ticket first if it has pending changes.

Ticket form — Create Serial No button

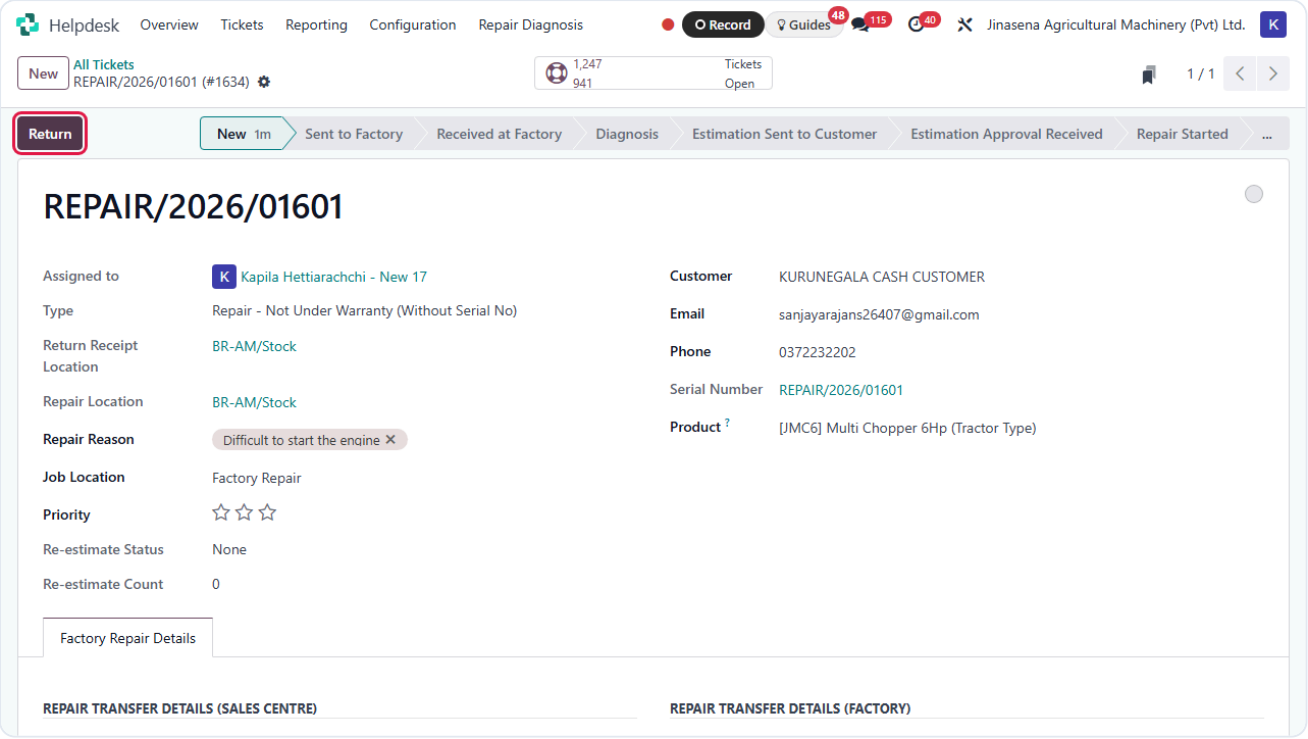

Section B — Receive the Item (Steps 12–14)

12 Return — receive the item

Navigation Ticket form → status bar

Action **Click Return.**

Description Records the item being physically received from the customer by creating a Returned Picking (e.g. `BR-AM/RET/00759`) in the Ready state.

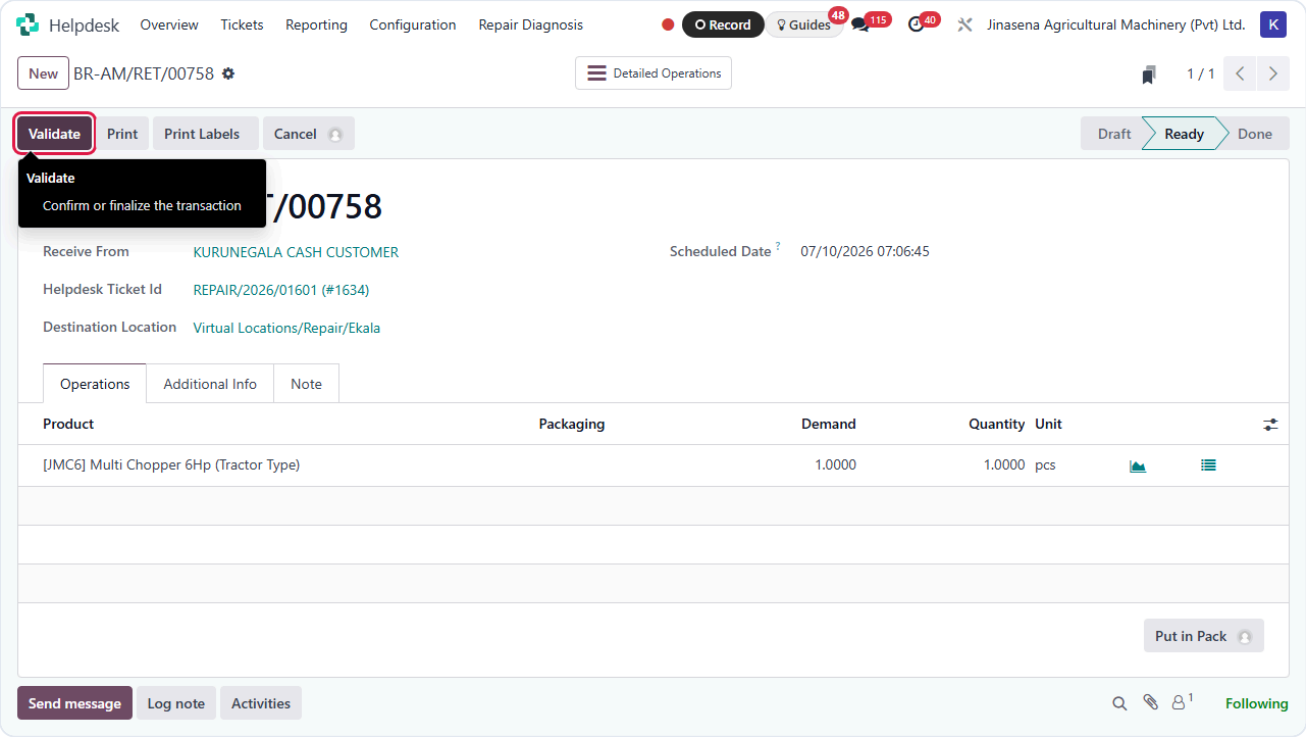

Ticket form — Return button

13 Validate the receipt

Navigation Returned Picking → status bar

Action **Click Validate.**

Description Confirms the item has arrived into the repair stock location. The ticket cannot move to the factory until this picking is Done.

Returned Picking (Ready) — Validate button

14 Close the picking and return to the ticket

Navigation Returned Picking → Close

Action **Click Close (or the breadcrumb) to return to the ticket.**

Description Takes you back to the ticket, where **Send to Factory** is now available. No separate screenshot exists for this step: on this instance the picking opens as a full page, not a dialog, so there is no distinct "Close" screen.

No screenshot for this step (see description).

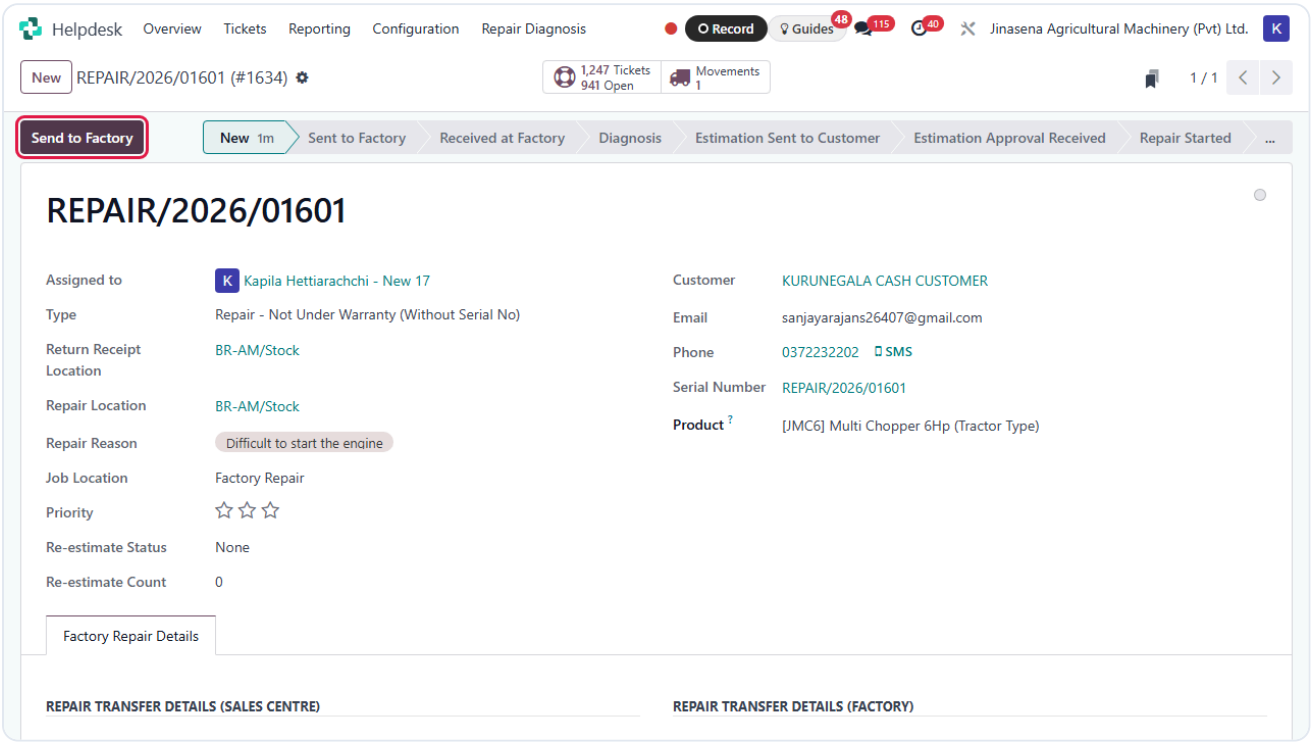

Section C — Send to Factory and Create the Task (Steps 15–18)

15 Send to Factory

Navigation Ticket form → status bar

Action **Click Send to Factory.**

Description Sends the item to the factory for repair; the ticket moves to *Sent to Factory*.

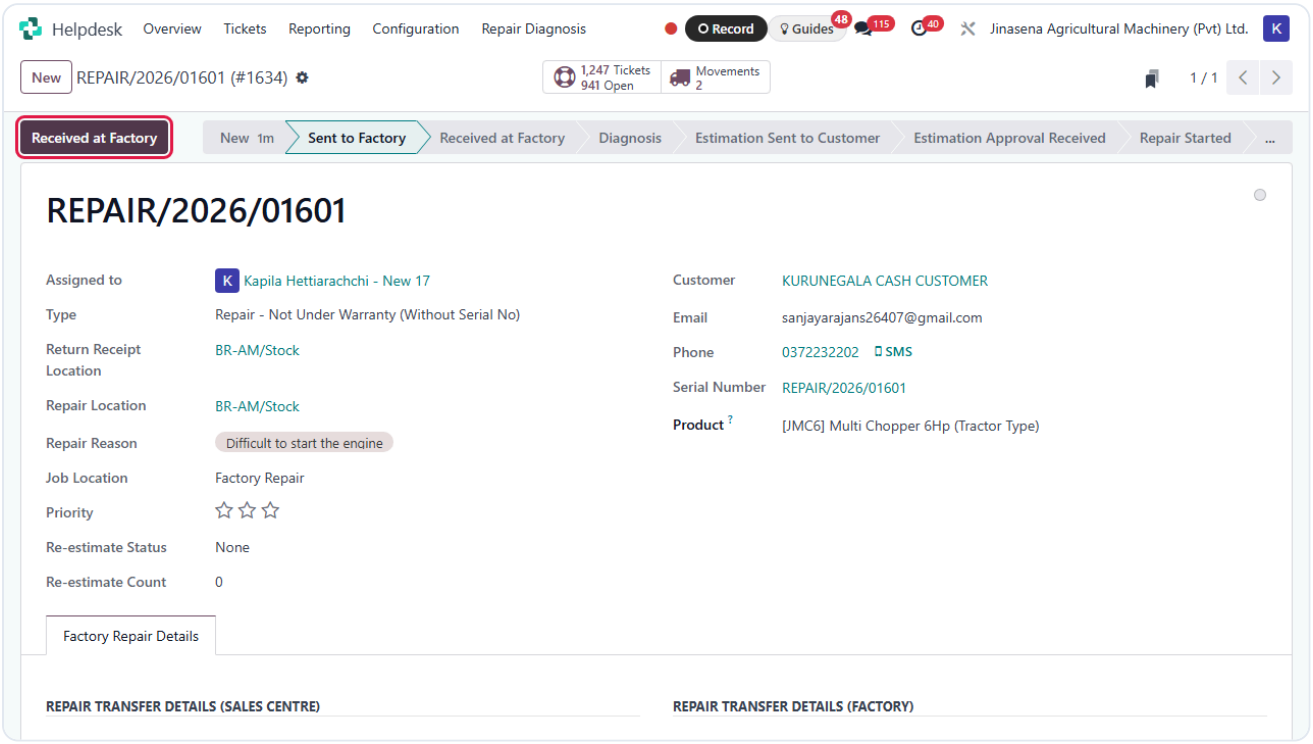

Ticket form — Send to Factory button

16 Received at Factory

Navigation Ticket form → status bar

Action **Click Received at Factory.**

Description Confirms the factory has received the item; the ticket moves to *Received at Factory*.

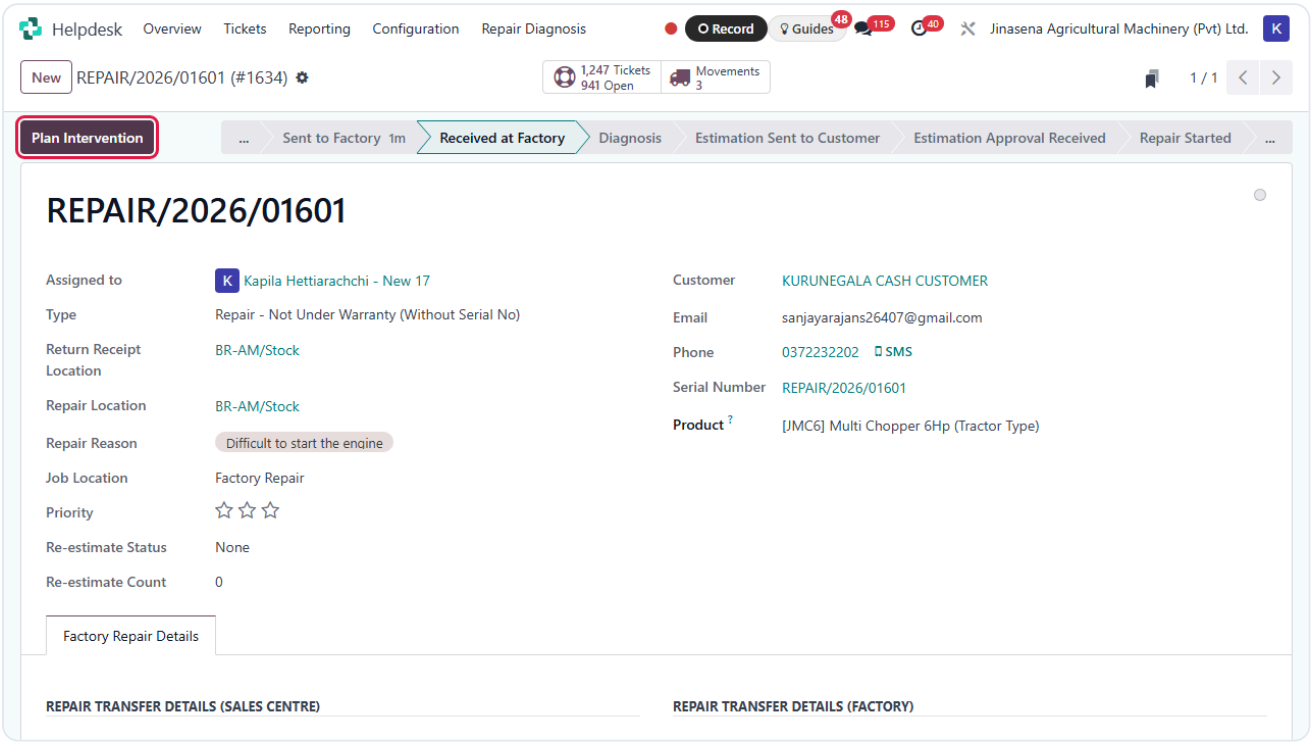

Ticket form — Received at Factory button

17 Plan Intervention

Navigation Ticket form → status bar

Action **Click Plan Intervention.**

Description Starts creating a Field Service task for the repair technician.

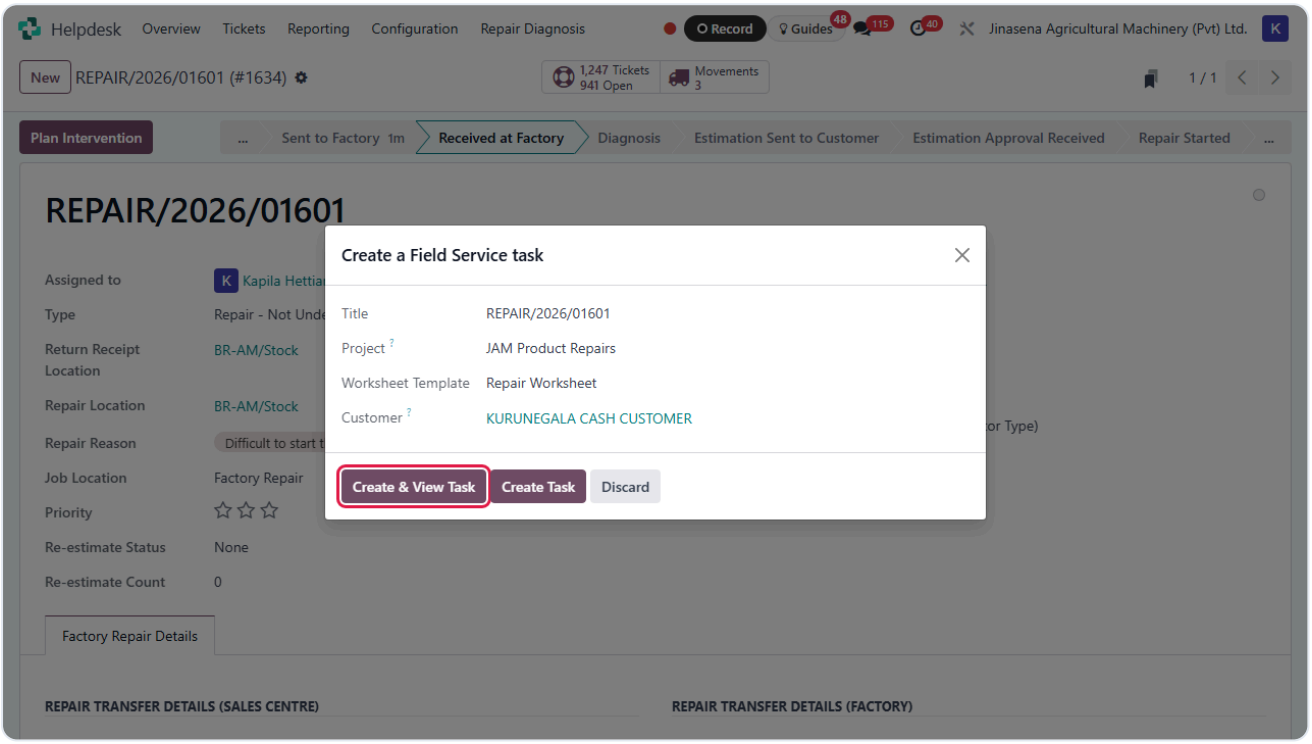

Ticket form — Plan Intervention button

18 Create & View Task

Navigation Create a Field Service task dialog

Action **Click Create & View Task.**

Description Creates the task (same name as the ticket) and opens it in a dialog on top of the ticket.

Create a Field Service task dialog — Create & View Task button

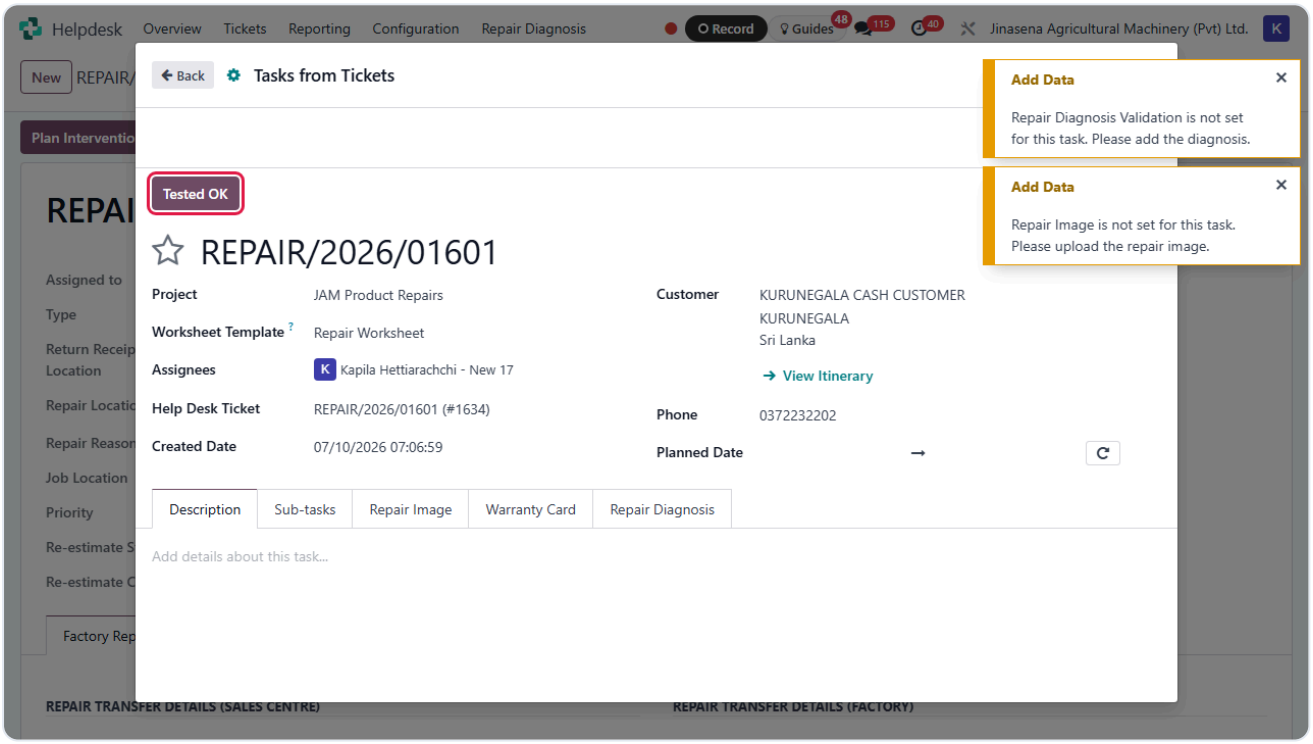

Section D — Complete the Task as Tested OK (Steps 19–21)

19 Tested OK

Navigation Task dialog → header

Action **Click Tested OK.**

Description Use this when the technician finds the item works and needs no repair. It skips the diagnosis, parts, quotation and payment steps of the full flow (the "Add Data" reminders about diagnosis and image can be ignored).

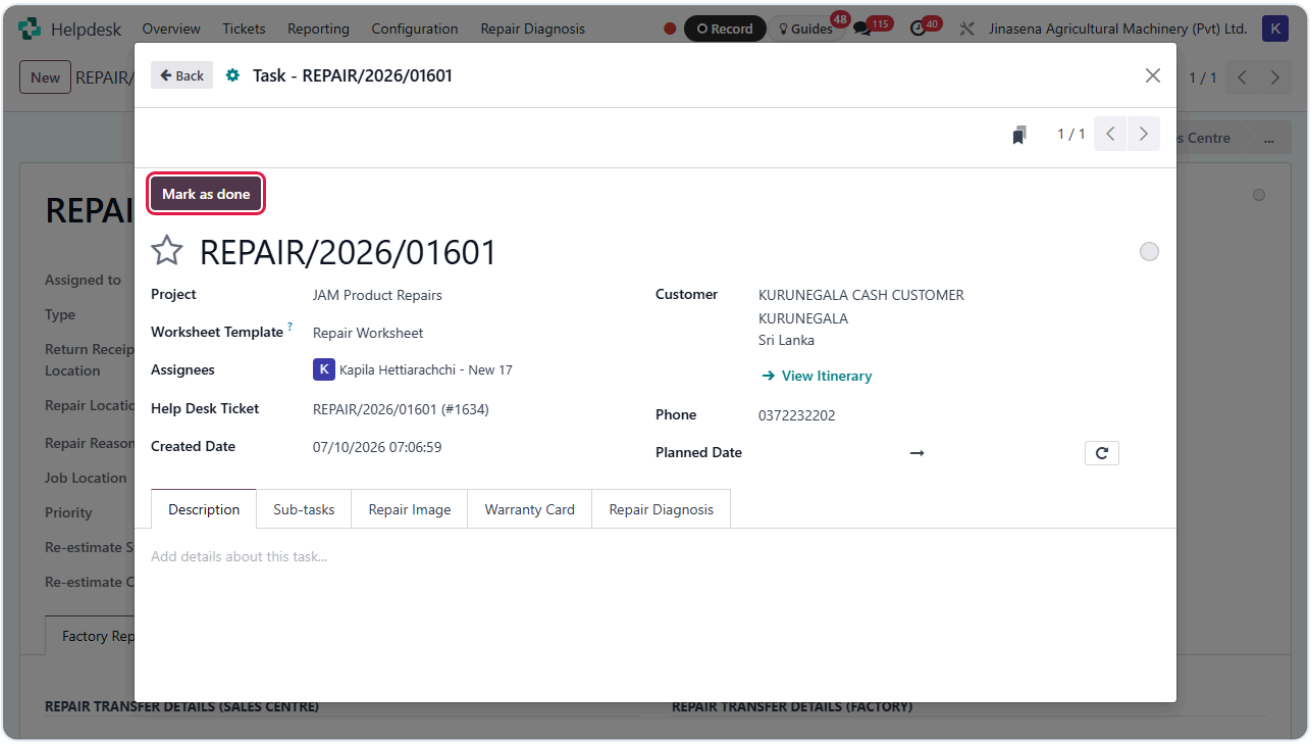

Task dialog — Tested OK button

20 Mark as done

Navigation Task dialog → header

Action **Click Mark as done.**

Description Closes the work on the task; the ticket moves to *Repair Completed*.

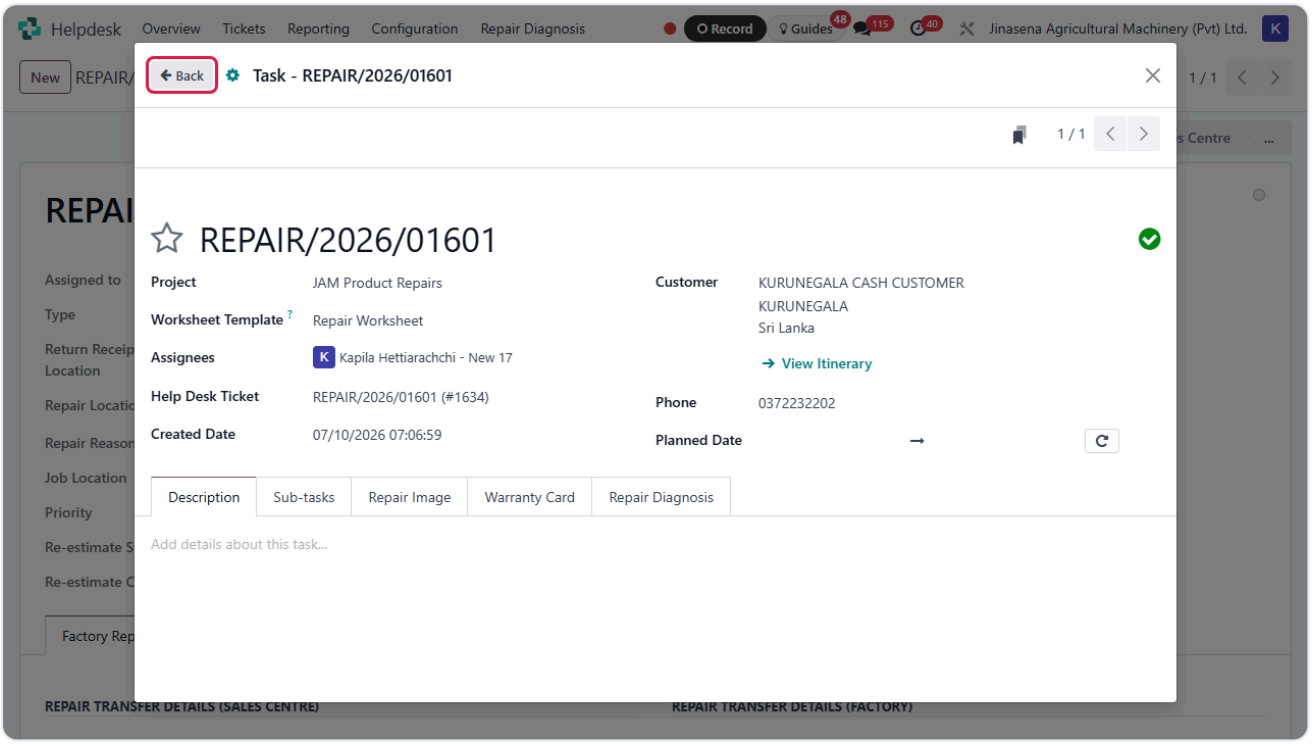

Task dialog — Mark as done button

21 Back to the ticket

Navigation Task dialog → header

Action **Click Back.**

Description Returns to the ticket. The task now shows a green done check.

Task dialog (done) — Back button

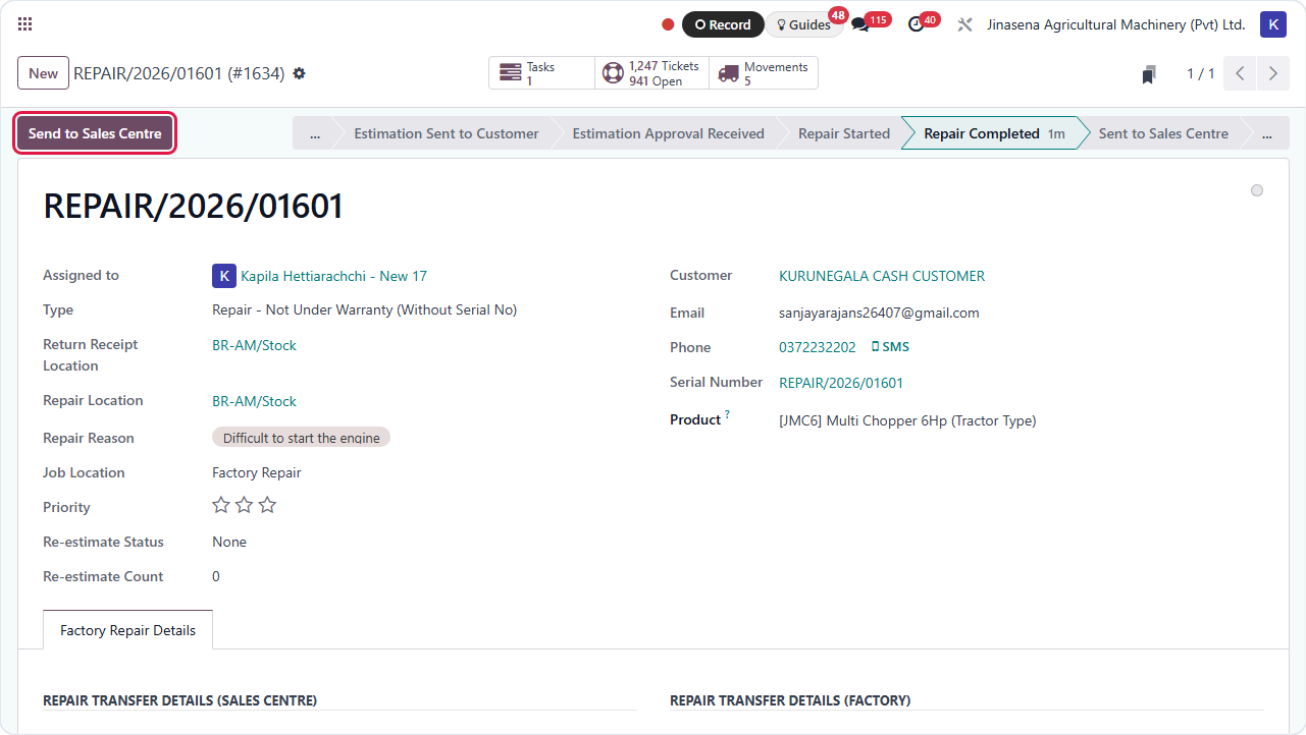

Section E — Return to the Customer (Steps 22–26)

22 Send to Sales Centre

Navigation Ticket form → status bar

Action **Click Send to Sales Centre.**

Description Sends the tested item back to the sales centre. The button can take a few seconds to appear after the task is closed — reload the ticket if it is not yet shown.

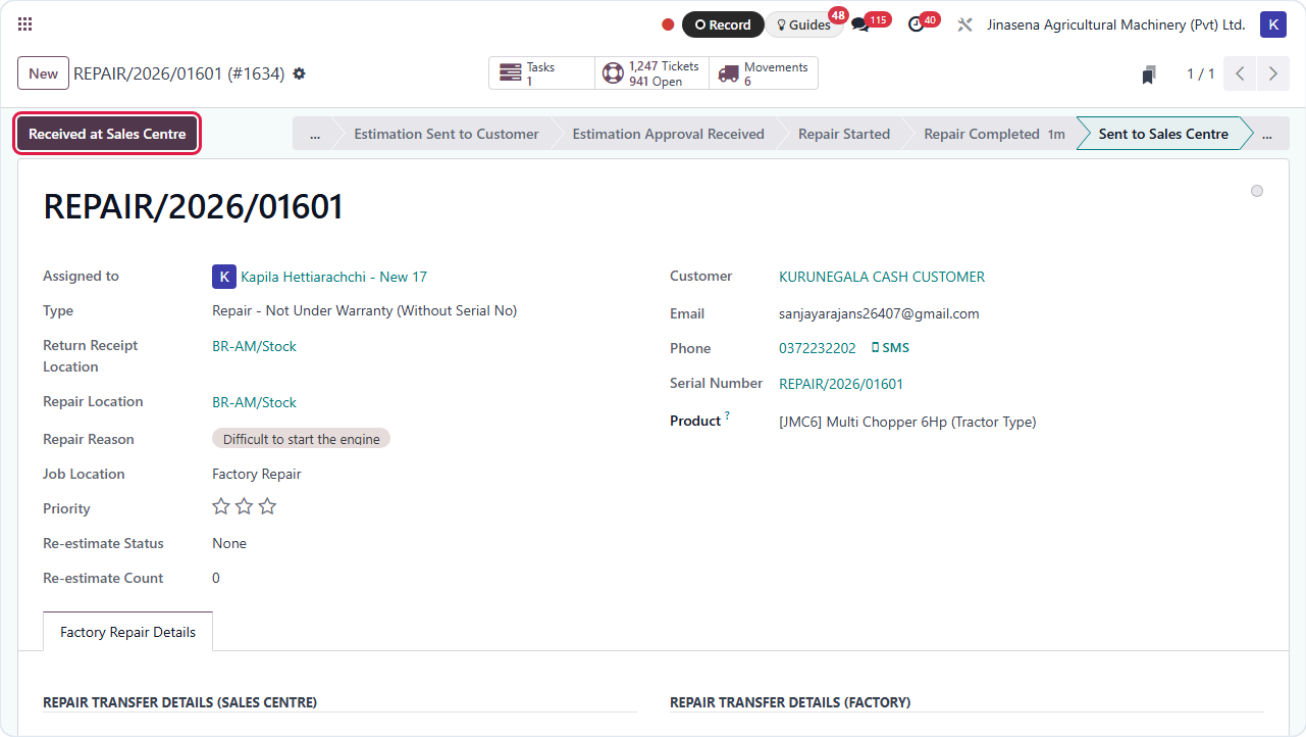

Ticket form (Repair Completed) — Send to Sales Centre button

23 Received at Sales Centre

Navigation Ticket form → status bar

Action **Click Received at Sales Centre.**

Description Confirms the sales centre has the item back; the ticket moves to *Received at Sales Centre*.

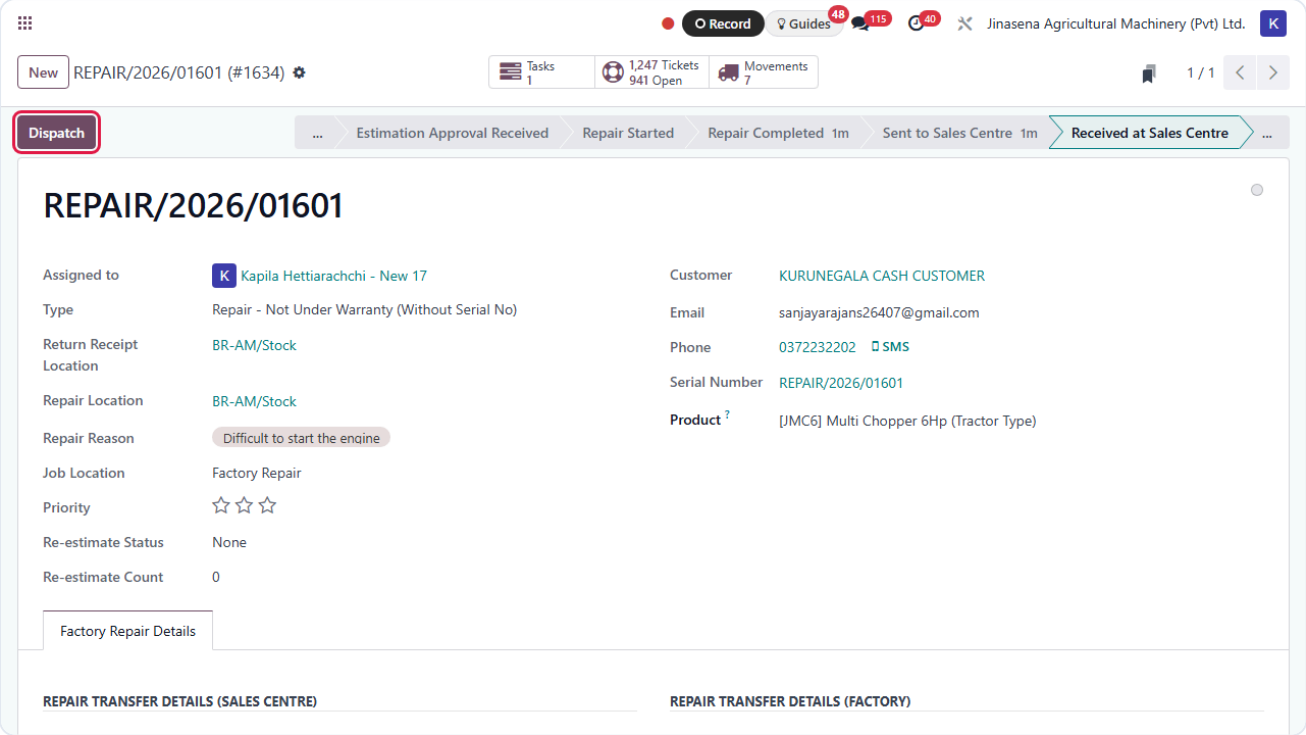

Ticket form — Received at Sales Centre button

24 Dispatch

Navigation Ticket form → status bar

Action **Click Dispatch.**

Description Hands the item back to the customer. Because the result is Tested OK, no payment is needed first. This opens a Returned Picking for the item. The button can lag a few seconds — reload if needed.

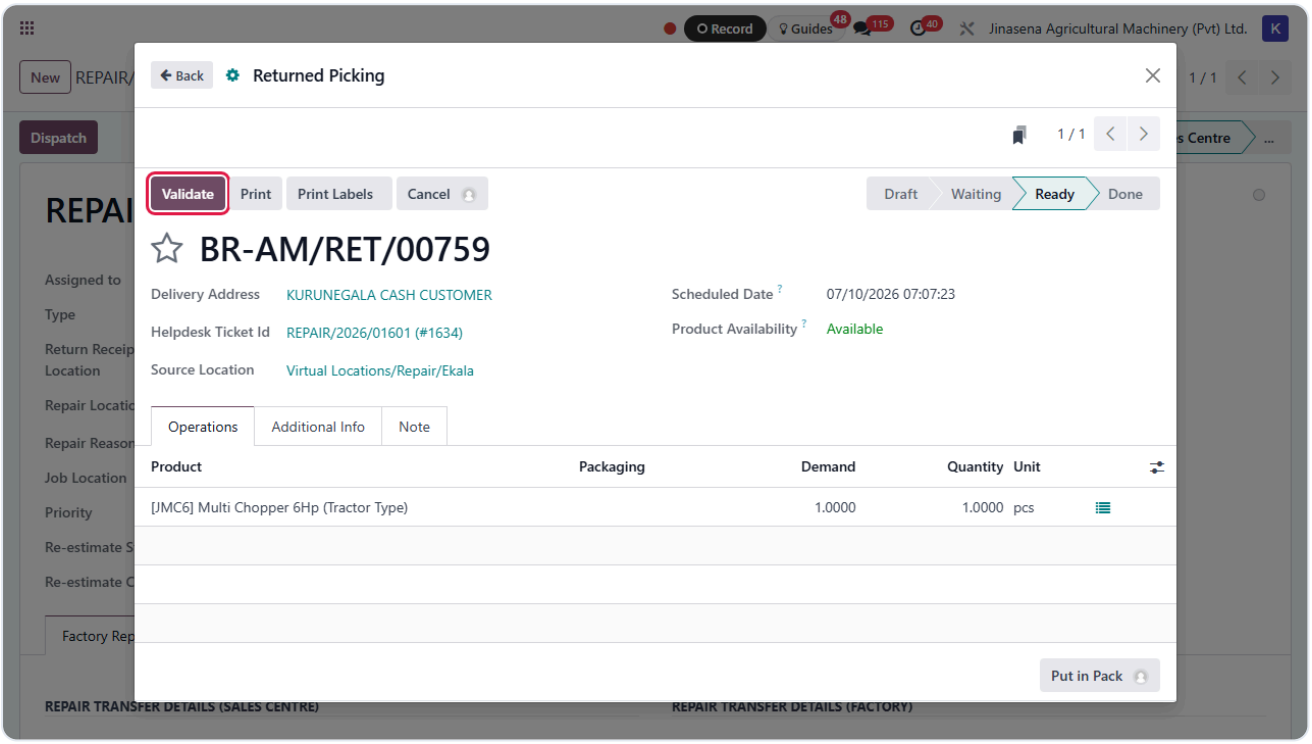

Ticket form (Received at Sales Centre) — Dispatch button

25 Validate the dispatch

Navigation Returned Picking dialog → header

Action **Click Validate.**

Description Completes the outgoing transfer of the repaired item to the customer.

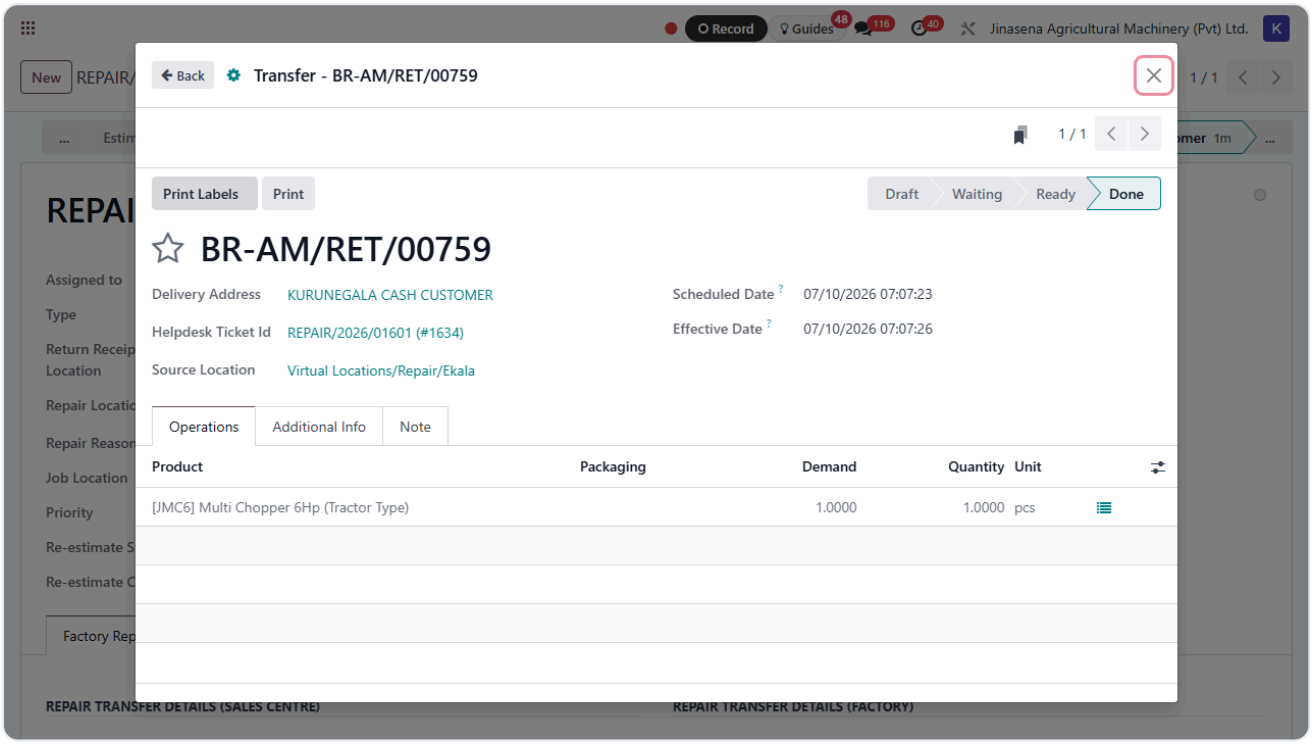

Returned Picking dialog (Ready) — Validate button

26 Close

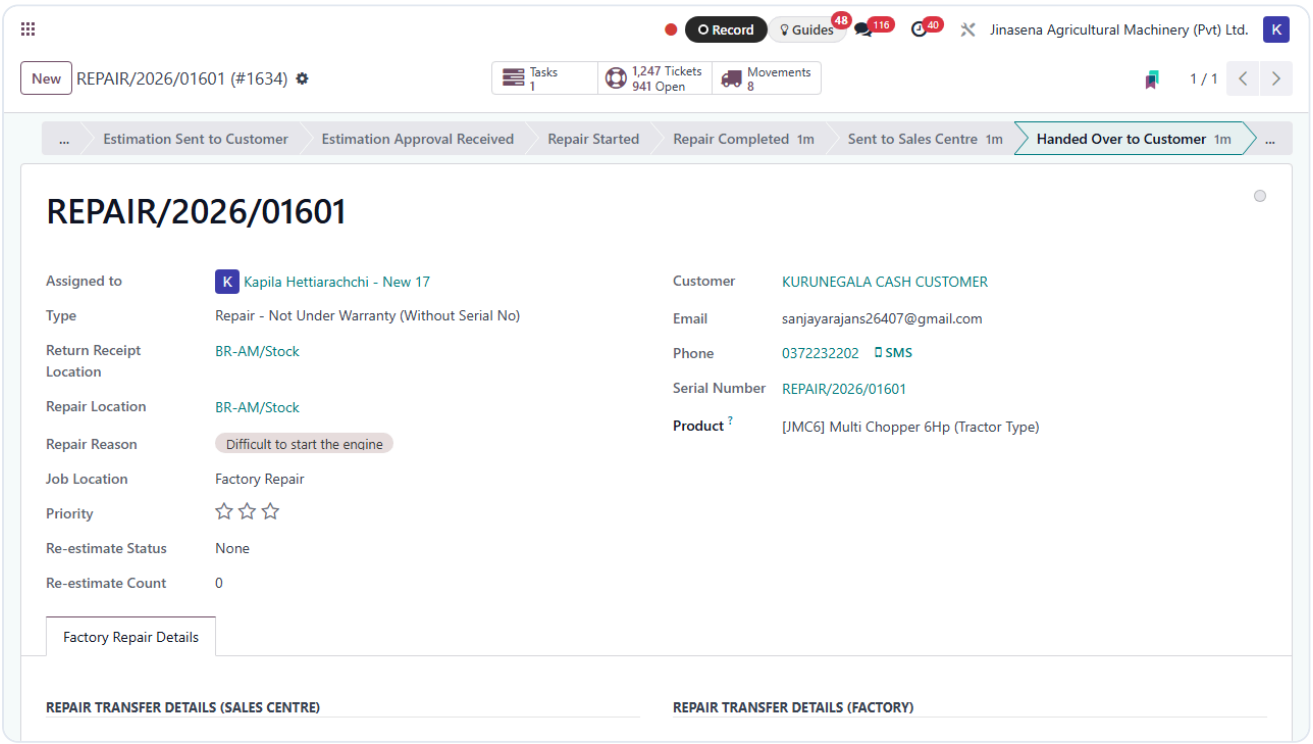

Navigation Returned Picking dialog (Done)

Action **Click Close (the X) to return to the ticket.**

Description The ticket is now in *Handed Over to Customer* — the repair is complete.

Transfer dialog (Done) — Close button

Result: ticket in Handed Over to Customer, after the Close action

QA notes

- Steps 1-18 are identical to the "Full Flow" (1A) guide; only the task-completion and return legs (steps 19-26) differ: **Tested OK** replaces diagnosis / image / parts / quotation / deposit / delivery chain / balance payment.
- The **Return** button (`fix_repair_action_direct_return`) raises "You may only return Done pickings" server-side but still creates the Returned Picking first. The automated run calls it, swallows the error, then validates the resulting picking via `/web/dataset/call_kw` (the picking's Validate button is hidden/unreliable under the Studio views).
- The Returned Picking opens as a full page here (not a dialog), so the tour step "Close" after the first Validate has no separate screen; the dispatch Validate/Close at the end do use a dialog.
- **Send to Sales Centre** and **Dispatch** become visible only after a full page reload once the previous action completes (computed `task_done` / stage state). A hash-only navigation does not refresh the record, so the automated flow uses `page.reload()` in a polling loop.
- The tour records **Tested OK** by `button[name="2316"]` (an action id that differs per database); the automated flow matches it by its label instead. **Mark as done** / **Validate** use `data-hotkey="v"` in the tour; the flow matches by label.
- Repair Reason is selected before Customer/Product (tour order); Customer and Product each trigger an onchange re-render, so the flow waits about 1 second after each commit.
- Each screenshot is captured immediately before the step's action with the target element framed in red (a temporary CSS outline applied to the live element only for the capture). Screenshots come from one clean, fully-passing automated run against the staging instance.
- The "Add Data" toast notifications on the Tested OK screenshot (diagnosis/image not set) are expected for this shortcut path; they do not block the flow.
- The staging database is a temporary Odoo.sh environment, automatically deleted on 12 October 2026; regenerate the screenshots on the production instance if needed.
